

Work Experience week 2020

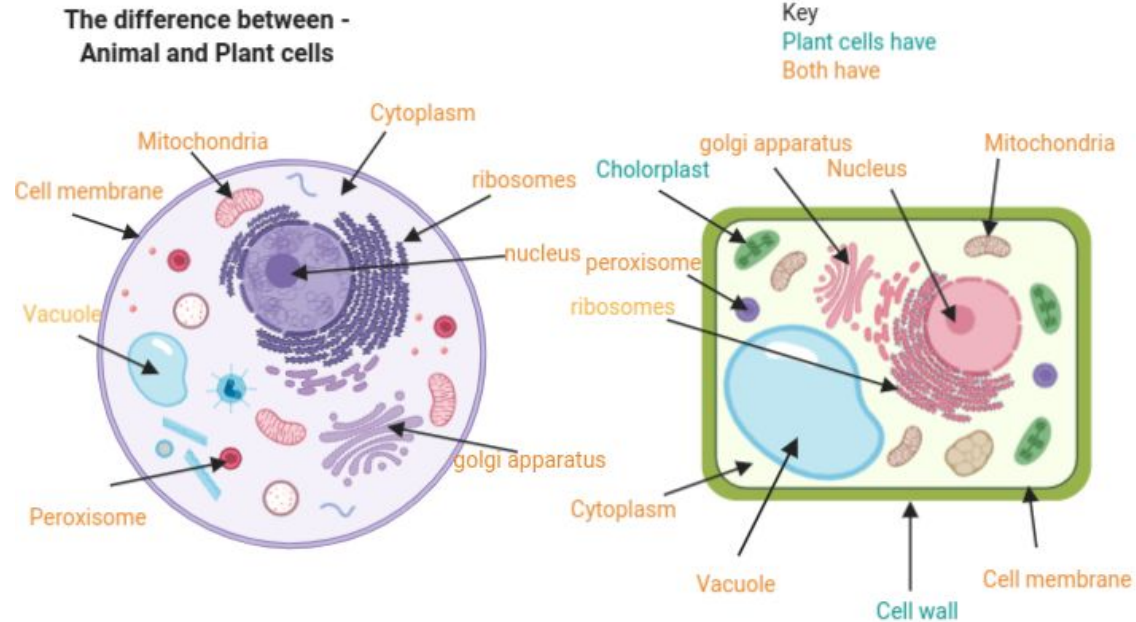

Anna Turner

What did i learn

I learned how to make and create things in bio render .

How to improve my critical thinking.

How in science you dont have to down one route or subject

What surprised me most?

I am really terrible at handling/using computer programs but somehow i was able to use the bio render.

I did realise that GM products that they actually had special traits or uses i thought they were just made/created to end world hunger for example, Golden Rice, which was developed in the hopes of combatting that problem by a team of European scientists in the late '90s, was genetically modified to provide an essential nutrient that white rice lacks: beta-carotene, which is converted into vitamin A in the body. Which would help a vitamin A deficiency.

Overall experience

I really enjoyed this week it has opened my eyes to many possibilities to my future career and life.

It has helped me gather skills and formation that i didn't have but now do.

This has been really fun.
