

LIFE SCIENCES WORK EXPERIENCE WEEK

During this week, the activities and presentations were very eye-opening and apprising, going into detail about the use of animals and plants in research. This really inspired me to explore the field further. The cooperation with students also enhanced my communication skills and strengthened my adaptability skills as the week was virtual.

MONDAY

The Introduction and Ice breakers were creative and helped participants get comfortable with others. Additionally, The Careers Speed Dating videos were insightful and enjoyable, giving adequate insight on each course.

TUESDAY

I really appreciated the Plant Science presentation as I, personally have never delved into that region of science. I think the researchers really explained the course and the various topics very well. On top of that, the activity gave me the opportunity to analyse data with students.

WEDNESDAY

The Medical Research presentation followed by the Q&A was very insightful. I was really surprised by the significance of research in the field. Later, we had an activity involving animals in research where we learned the laws on using animals and certain enrichments offered to them.

THURSDAY

I really enjoyed the BioRender Activity and Science games as it was very entertaining and challenging. The Q&A was also very enlightening; describing their daily routines and how they prioritise projects was very interesting.

FRIDAY

The personal statement workshop really bettered my understanding of the structure and layout of a good personal statement. The presentation emphasized the importance of reflecting and how to display our skills through all activities. Overall, the week has been very interesting and valuable. I really enjoyed the Q&A's!
